## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 11-22 are drawn to a high brightness light emitting diode, classified in class 257, subclass 98.
- II. Claims 1-10 are drawn to a method for producing a high brightness light emitting diode, classified in class 438, subclass 22.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the device is made by forming a metal contact, p-GaP layer, P-cladding layer, active layer, N-and cladding layer and then etching the layers to expose the N-cladding layer, but alternatively the device could be made by masking the N-cladding layer and selectively depositing the other layers, so in the end the N-cladding layer will still be exposed and making the same device.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 2826
